

Simple and powerful

Just connecting the video monitor and the door entry panel into a LAN, IPlus will start working. The new IPlus from Golmar is a peer-2peer IP solution that runs without any server, that is what makes this system really powerful and simple. IPlus is a multichannel intercom, no more the busy signal that makes visitors wait. Built-in image memory and Telephone interface will ensure that the tenant will never miss another call. The concierge unit can broadcast messages to one or groups of monitors that will be displayed at the monitor screen. Thanks to TCP/IP protocol IPlus can run on LAN alongside other devices, distances will not be a problem anymore. A design for the most demanding high-end customers.

IP Door entry system

Plug & Play

The elegance meets the innovation.

The new IPlus monitor, to be installed surface is only 17 mm deep. Its minimalistic design and the harmony of its layout configures this monitor as one of the most beautiful in the market. It is possible to change the central frame color to fit any ambience.

The new generation IP video monitors from Golmar offer multiple functions. Intercom with any other monitor of the system, image memory and tracking up to 8 cameras are just some of them.

IP door entry panel with full color TFT built-in

Front of 2.5mm. thick manufactured in ANSI 316 stainless steel. Treatment to avoid fingerprint spots.

Easy to find the tenant's name by scrolling the list or by dialing the number directly.

RJ-45 connector at the rear of the panel makes it easy to connect. Only 20mm deep for such an innovative door entry panel, will amaze all consultants and architects.
