- Vending Reports available:

  o Monthly Vending Machine Transactional Reports

  o Monthly Employee Transactional Reports

  o Stock List Reports

  o Employee Balance Reports

- Full Network Solution

supporting the trade

PT-Vend, developed and distributed by Powell Tronics, is a comprehensive Cashless Vending System that is fully integrated to Impro's IXP400 or ImproNet system. An IP capable system, PT-Vend offers the flexibility of regulating vends using proximity, biometric or Pin Code based transactions.

Compatible with a range of Vending Machine manufacturers, PT-Vend was originally developed to cater for Vendo's G-Snack and CIRO's Brio 3 vending machines but has since become compatible with several models within these brands and others. Using a networkable interface that communicates directly to the control board of the vending machine, and either Impro's BMTA or MDTA reader or Morpho's MA500 biometric terminal, employee vending is regulated by the access group allocated to the employee as well as their credit availability. Customised operations such as automatic global credit limit resets or individual credit limit alterations are just some of the POS like capabilities or PT-Vend.

MDTA
Multi-Discipline Time & Attendance Readers

A variety of reports within PT-Vend, allow the end user to check vending usage with the Vending Machine Transactional Reports and Stock List Report. Employee Transactional Reports are also available to billing requirements or general usage reporting. All reports can be exported to Excel or PDF for mailing requirements.

PT-Vend also boasts an alarm notification system that emails authorized personnel when a vending machine, Impro controller or the PT-Vend application have gone off line minimizing downtime on site.
