

# PT-MS

Monitoring Service

## Integrated Solutions

Developed primarily for the trade as a proactive tool to monitor the state of access control sites, PT-MS with its browser based dashboard and email distribution mechanism provides installers and site administrators with real time statistics of access control hardware and system status.

- System status which include offline hardware and data processing queue status emailed to distribution group at regular intervals
- Administrators are immediately notified of system failures including offline servers or databases and concerning slow processing of data queues
- Perfect model for use as part of Service Level Agreements (SLAs) between installers and sites
